PERICH
SABATINI

Architecture
in Progress

ARCHITECTURE ISN'T REALLY ABOUT DESIGNING BUILDINGS.

It's about orienting spaces around people's needs. The people who use its rooms, who finance it, who construct it, those who make decisions that affect it. Designing a structure is about the people who live and work in and around it, and the lives it will impact for generations to come.

The people of Dekker Perich Sabatini know our responsibility extends further than architecture itself. Because the influence a place has extends far beyond walls, and the stakes involved are higher than any financial investment. To add to it, the needs of the communities a building lives within are changing at an ever-increasing pace. It is no longer enough to design beautiful spaces that abide by the standards of architecture awards. To create environments that better the way we work, learn, heal, play, and live requires innovation. And true innovation is only possible with a perspective that transcends sectors, vendors, clients, and cultures. It includes them all.

For over 60 years, our teams have woven together empathic insights through our diversity of knowledge and expertise, in turn designing places that serve a multitude of changing needs.

A HISTORY OF PROGRESS

Art Dekker Architects was founded in 1959 by the father of current principal Dale Dekker. In 1998, Dekker Perich & Associates and Holmes Sabatini & Associates merged to become Dekker Perich Sabatini, which brought together multiple specialties under one roof. It was a revolutionary group of people suited to solve increasingly complex challenges.

Over the last 60 years, our clients' challenges have grown, and thus, so has our team and our reach. Today, our offices span New Mexico, Arizona and Texas, each with a team of passionate and talented people intent on making the best impact possible on the neighborhoods they serve. We can't predict the future, so we can't tell you exactly what tomorrow will bring. But we do know it will include using architecture and design to help people experience the world differently.
